DATA DISCOVERY

Next-Generation Discovery Technology

Automatic forward-thinking data discovery and progressive learning features continually create new reporting opportunities for your business over time.

Knowledge

Exposes data you never knew you had. More information results in faster and better decisions.

Organize Data in Your Business Terms

Discovery does the best it can to create business context with what it finds in your database. Unfortunately, not all databases are in the best of form. To solve this problem, users and business owners can group, rename, and organize data elements into whatever form makes the most sense to the business.

Self-service reporting opportunities in common business terms is key to running any business efficiently.
