

# SELF-SERVICE DATA

SCALABLE SOLUTIONS

REALIZED OPPORTUNITIES

## Data Selections Framework

Database access for users in business terms they understand.

## Next-Generation Discovery Technology

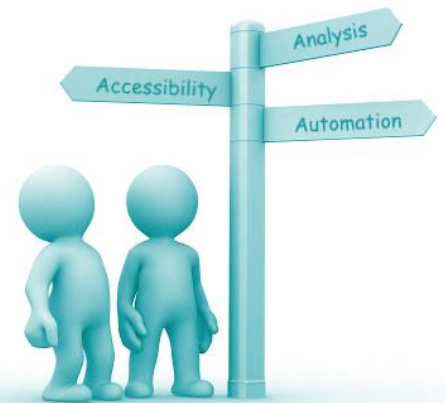

### Instant Access to Your Data

IT departments are stretched thin—and getting thinner. With tight budgets and a shortage of staff to manage databases, many IT departments are delaying data requests, slowing business decisions, and costing companies money.

Using relational database forensics and progressive learning technology, the forward-thinking data discovery capability of the framework creates self-service reporting opportunities vital to identifying key insights within your business data.

### Features:

- Extract real-time data for any reporting need
- Compatible with all existing BI or Reporting Tools
- Save time – No need for IT to write SQL Queries
- Data separation by group with Data Teams
- Safe – Role based security (Column & Row)
- Reduce IT costs
- Less decision risk due to stagnant data
- Reduced network traffic – requested data only
- User Defined Fields (aka Formulas) support
- Simple implementation

## Smart Decisions

**Businesses need to recognize market opportunities and base their critical decisions on real data rather than guesswork.**
